

Dear Wolf,

On behalf of the whole team, I am excited to invite you to participate in our documentary film project.

This film is about the Will to Live and Life itself — about the Human Spirit and the highest qualities within us. We are creating a documentary in the Netflix style, focusing on a hero — an individual who takes on the incredible challenge of climbing Kilimanjaro in the ExoAtlet exoskeleton not being able to do so without this help. Our goal is to feature this documentary on Netflix, and it might even become a short series, shot by professional filmmakers with a cinematic approach: think "Hemingway in pictures — the snows of Kilimanjaro."

This is a story that deserves to be seen — a person putting on an exoskeleton and climbing Kilimanjaro, defying all expectations. Our aim is to create a powerful film that challenges perceptions, doubts, and judgments about the person who, despite physical limitations, can achieve the extraordinary. This is the core mission of our project, and we would be honoured to have you join us on this journey. Your example will inspire everyone who watches our film.

We envision you as the Hero of our film. You are familiar with our exoskeleton, created by ExoAtlet engineers who dreamed of making it serve people. They turned their dream into reality, and now, all around the world, people are standing up again despite being told "impossible" due to various diagnoses.

Now it is possible!

The potential of the human spirit is limitless if there is a desire to live and to help others. Now is the moment to show how the mission of one person and the will to live of another can come together in ways no one could have imagined before. You've probably heard of Kilimanjaro. We invite you to conquer this peak. It will be a challenging journey that will require immense courage and determination.

Before making our final decision on working together, we would like to invite you to get acquainted with the project. To ensure that both sides are fully committed, we will need to conduct several training sessions in the exoskeleton, including walking on rough terrain and a brief health assessment. We would also need your confirmation that you are ready to go all the way to the summit.

Warm regards,

Peter Kreynin
